

# AIHOT: Build Your Own News Site in 10 Mins

5,989 stars · MIT · checked 2026-10-05

## WHAT IT IS

AIHOT is an open-source engine by KKKKhazix that builds custom AI-powered news aggregators in minutes, identifying and reporting on hot topics.

## GET IT RUNNING

```
git clone https://github.com/KKKKhazix/AIHOT.git myhot
cd myhot
node scripts/init-env.ts --llm-key
docker compose up -d --build
```

## MAKE THESE 3 THINGS

- Build an industry-specific news site (e.g., finance, HR, real estate).
- Generate automated daily, weekly, and monthly AI-curated reports for internal teams.
- Create a backend for custom AI agents by providing Agent-consumable feeds.

## SKIP IT IF

Needs technical setup and custom 'KnowHow' configuration; not a plug-and-play solution.
