Run DeepSeek Superagent: Your Autonomous GitHub AI

12,894 stars · MIT · checked 2026-11-02

WHAT IT IS

DeepSeek Superagent is a free, autonomous coding agent for a single GitHub repository, built by DeepSeek AI as a research prototype to minimize human attention and maximize value.

GET IT RUNNING

```
Read SETUP.md in this repository and set up dsh-superagent with me.
(https://github.com/deepseek-ai/dsh-superagent-prototype)
Initiate the setup command within your DeepSeek Harness environment.
The agent-driven setup guides you through short questions and shows
the full plan.
```

MAKE THESE 3 THINGS

- Write code and manage a GitHub repo autonomously.
- Proactively identify tasks, execute development, and suggest improvements.
- Automatically fix security vulnerabilities and submit pull requests for review.

SKIP IT IF

Not production-ready, may have bugs. Requires an existing DeepSeek Harness setup. Not for critical production systems yet.
