

10 free Claude Code skills that feel like cheat codes

— with the exact command to install each one

Agent Skills are drop-in upgrades that turn Claude Code into a designer, a researcher, a security auditor — even a whole engineering team. These ten are free, open-source, and verified live on GitHub (2026-06-27). Each card has what it replaces, the exact install line, and an honest read.

ALL FREE

EVERY ONE

Exact install command

NO HYPE

Honest read on each

THE TEN — #1 → #4

1

GStack

REPLACES A 23-PERSON ENG TEAM

★ 117k · MIT

github.com/garrytan/gstack

```
> git clone --depth 1 https://github.com/garrytan/gstack.git ~/.claude/skills/gstack
cd ~/.claude/skills/gstack && ./setup
```

Garry Tan's (CEO of Y Combinator) exact setup — 23 specialists: a CEO, eng manager, designer, QA lead, security officer, release engineer. **Use now:** type `/review` before any commit. **Honest:** it's opinionated and heavy; install it, then keep the few commands you actually use.

2

Stop Slop

REPLACES AN EDITOR THAT KILLS AI TELLS

★ 12.7k · MIT

github.com/hardikpandya/stop-slop

```
> git clone https://github.com/hardikpandya/stop-slop ~/.claude/skills/stop-slop
```

Teaches Claude every AI-writing tell — em-dashes, “it's not X, it's Y”, hollow intros — and strips them. **Use now:** ask Claude to “rewrite this with stop-slop”. **Honest:** it's a style guide, not magic; you still set the voice.

3

Graphify

REPLACES GREP + YOUR MEMORY

★ 72.9k · MIT

github.com/safishamsi/graphify

```
> uv tool install graphifyy && graphify install
then: /graphify .
```

Turns any folder of code, SQL or docs into a queryable knowledge graph = real agent memory. **Use now:** run it once, then ask “where does login touch the database?”. **Honest:** the first index takes a minute on big repos — worth it.

4

Understand Anything

REPLACES A WEEK OF ONBOARDING

★ 68.6k · MIT

github.com/Egonex-AI/Understand-Anything

```
> /plugin marketplace add Egonex-AI/Understand-Anything
/plugin install understand-anything → /understand
```

Builds an interactive map of any unfamiliar codebase — files, functions, data flow, plus an onboarding tour. **Use now:** open a new repo and type `/understand`. **Honest:** a map, not a substitute for reading the critical paths yourself.

5

Last 30 Days

REPLACES HOURS OF RESEARCH

★ 47.1k · MIT

github.com/mvanhorn/last30days-skill

> /plugin marketplace add mvanhorn/last30days-skill

then: /last30days [topic]

Searches Reddit, X, YouTube, HN and more at once, then ranks a brief by real engagement — not opinions. **Use now:** /last30days "AI coding tools" . **Honest:** it's a signal scan; verify anything you'll act on.

6

Frontend Design

REPLACES GENERIC AI UI

Official · Anthropic

github.com/anthropics/skills

> npx skills add https://github.com/anthropics/skills --skill frontend-design

Anthropic's own design skill — picks a real aesthetic direction and ships production-grade UI, not the same purple gradient. **Use now:** just ask for a page; it auto-applies. **Honest:** opinionated — feed it your brand tokens if you have a strict system.

7

Taste

REPLACES A DESIGN DIRECTOR'S EYE

★ 52k · MIT

github.com/Leonxlnx/taste-skill

> npx skills add https://github.com/Leonxlnx/taste-skill

Generates several design variants, critiques them, and ships the one with the best layout, spacing and motion. **Use now:** hand it a clunky UI and ask for a refined pass. **Honest:** pairs best with Frontend Design above.

8

Remotion Superpowers

REPLACES A MOTION-GRAPHICS STUDIO

NEW · MIT

github.com/DojoCodingLabs/remotion-superpowers

> /plugin marketplace add DojoCodingLabs/remotion-superpowers

then: /create-video

Turns Claude into a full video studio on Remotion — voiceover, music, stock footage, captions, AI review loop. **Use now:** describe a video and type /create-video . **Honest:** brand new and small — you're early; expect rough edges.

9

Awesome Agent Skills

REPLACES ENDLESS TOOL-HUNTING

★ 26.6k · MIT

github.com/VoltAgent/awesome-agent-skills

> # browse the repo — each skill links its own install

1,497+ vetted skills from Anthropic, Stripe, Google and real teams — one searchable index. **Use now:** bookmark it; whatever niche problem you have, a skill probably exists. **Honest:** it's a directory — quality still varies per author.

10

Trail of Bits Security

REPLACES AN EXPENSIVE AUDIT

★ 5.9k · CC-BY-SA

github.com/trailofbits/skills

> /plugin marketplace add trailofbits/skills

40+ audit skills from the firm that audits real crypto and tech — static analysis, Semgrep, CodeQL, mutation testing. **Use now:** run one on your diff before you push. **Honest:** catches a lot, but it's a tool, not a full pentest.

HOW SKILLS ACTUALLY WORK - 3 STEPS

Add → Install → Use

Once you know these three moves, you can install any skill in the ecosystem:

1 · Add a marketplace

/plugin marketplace add owner/repo

— needed for skills shipped as plugins (cards #4, #5, #8, #10).

2 · Install

/plugin install name , or npx skills add <github-url> , or git clone into ~/.claude/skills/ — each card shows the exact one.

3 · Use it

Type the skill's slash command, or just describe the task — Claude auto-loads a skill by reading its **description**.

The Claude Code Skills Cheat Sheet · A Hyperautomation Labs Field Guide · 2026 · hyperautomationlabs.co/free/cheatcode · 2 / 3

YOUR FIRST 3 MOVES — DO THESE THIS WEEK

- ☐ **Install these THREE today.** `GStack` (#1), `Stop Slop` (#2) and `Last 30 Days` (#5) — the biggest instant wins for any workflow.
- ☐ **Bookmark** `Awesome Agent Skills` (#9) — it's the map to 1,497+ more. Whatever you need next is almost certainly already in there.
- ☐ **Before you ship anything, run** `Trail of Bits` (#10) on your code. Shipping fast is great; shipping fast and safe is the real cheat code.

READ THIS BEFORE YOU INSTALL ANYTHING

- ! **A skill is just a folder + a** `SKILL.md` . Plain-English instructions that teach Claude a specialty. It auto-loads by reading the description — no config, no build step.
- ! **All ten are free and open-source.** Mostly MIT; `Trail of Bits` is CC-BY-SA; `Frontend Design` is Anthropic's official skill. Star counts are live as of 2026-06-27 and still climbing.
- ! **Different install methods are normal.** Some use `/plugin marketplace` , some `npx skills add` , some `git clone` or `uv` . Use the exact line on each card.
- ! **Not just Claude Code.** Most of these also run in Codex, Cursor, Gemini CLI and more — the same skill, everywhere your agent lives.
