

Your Laptop Can Run a Private AI — Free, Offline, in Minutes

WHAT IT IS

Ollama is a free, open-source app (179,314 GitHub stars) that runs AI models like DeepSeek, Qwen, gpt-oss and Gemma fully offline on your own computer.

GET IT RUNNING

```
Windows: irm https://ollama.com/install.ps1 | iex  
Mac/Linux: curl -fsSL https://ollama.com/install.sh | sh  
Then run your first model: ollama run gemma4
```

MAKE THESE 3 THINGS

- A private chatbot that keeps working with the WiFi off
- Summarise confidential documents without uploading them anywhere
- Free coding help in your terminal, no rate limits

SKIP IT IF

Skip if your machine is low on RAM or you need frontier-model answers — local models are smaller and slower than the big cloud ones.
